

A Proud History of Refractory Services Solutions

At AusGroup, we have over 25 years' experience in the provision of services for refractory lined assets.

Powered by AGC, we ensure the safe and efficient delivery of refractory maintenance, upgrades and expansion projects, through an integrated service approach across a range of industries throughout Australia.

We have significant experience and expertise, advanced delivery methods, and comprehensive safety and quality systems. All our team members - including our highly experienced management team - are focussed on achieving successful outcomes for all clients at all times.

A Complete in-house Refractory Solution

As a fully integrated services provider, we provide comprehensive in-house solutions, delivering mechanical, electrical and scaffolding services for all refractory projects.

Our personnel have extensive experience across all major industries and materials including:

- Ferrous and non-ferrous
- Petrochemical
- Power generation
- Cement works
- Alumina and mineral processing
- Glass, carbon and acid linings
- Waste incineration

Inspection Services and Condition Monitoring

Our inspection monitoring and condition monitoring services deliver genuine value. By conducting a thorough visual inspection without the need to access confined spaces, we offer a safer, more cost effective and efficient means of refractory lining assessment.

By utilising a variety of technical aids and techniques, we are able to monitor the condition of refractory linings throughout their lifecycle and identify patterns of deterioration and subsequent modes of failure.

We obtain crucial statistical data which aids in engineering design solutions or evaluating alternate material selections without imposing additional risk to the integrity of the asset.

Comprehensive range of refractory services, from minor repair works to large construction project.

Refractory Solutions for Projects of all Sizes

Our refractory division provides a comprehensive range of refractory services, from minor repair works to the largest of construction projects.

Our specialist team has extensive experience working across all areas of the refractory industry and implements the latest techniques and applications including:

- Inspection Services (API 936 Certified)
- Maintenance, repairs, reconstruction and refurbishment of existing assets
- Technical support (in-house and external)
- Project management
- Material selection
- Procurement

A Highly Innovative Approach

Powered by AGC, we apply market-leading technology in the delivery of refractory solutions.

We pride ourselves on our commitment to technological development and our ability to retain talented specialists. By utilising purpose-built technology, software and specialist equipment we offer innovative and non-invasive remote lining assessment and scope preparation.

We use the latest techniques and applications for a range of processes including:

- Guniting & Shotcrete application
- Casting
- Ceramic fibre lining
- Fire and insulation brickwork
- Fireproofing
- Plastic ramming
- Acid resistant linings
- Pre-cast shapes

A Compelling Value Proposition

Our value proposition is driven by our core values, through which we put our clients first.

A client-focused model. Combining a fully integrated services approach with a single point of contact model, we ensure an efficient approach to communication and project delivery.

An uncompromising approach to safety and quality, ensuring reliable delivery and performance of all services at all times.

Market-leading innovation and technology, maximising effectiveness and efficiency of project delivery.

A highly committed and experienced team, with a focus on achieving successful outcomes for clients at all times.
